The line graph illustrates the mortality rate in the United States over a 60-year period. The y-axis represents the number of deaths per 100,000 population, ranging from 0 to 20. The x-axis represents the year, from 1950 to 2010. The graph shows a general downward trend, starting at approximately 15 deaths per 100,000 in 1950 and ending at approximately 10 deaths per 100,000 in 2010. There are several notable peaks and troughs, including a sharp peak around 1965 and a significant dip around 1975.

The bar chart displays the population aged 15 and over in 2019, categorized by sex and age group. The Y-axis represents the number of people in thousands, ranging from 0 to 1,000. The X-axis lists age groups from 15-19 to 65+. A red line indicates the total population for each age group. The population is relatively stable across all age groups, with a slight increase in the 15-19 age group and a slight decrease in the 20-24 age group. The population is slightly higher for males than for females across most age groups.
