

The line graph displays the daily death toll from COVID-19 in the United States. The x-axis represents time from March 2020 to March 2021, with major ticks every two months. The y-axis represents the number of deaths, ranging from 0 to 100,000 in increments of 20,000. The graph shows a sharp initial rise to nearly 100,000 deaths in early April 2020, followed by a period of fluctuation with a peak in June 2020. A significant decline occurs in late 2020, reaching a low point in January 2021. This is followed by a rapid and sustained increase, peaking again in early March 2021 at approximately 80,000 deaths, before showing a slight downward trend.
