

The line graph displays the daily number of deaths from COVID-19 in the United States. The x-axis represents time from March 2020 to March 2021, with major ticks every two months. The y-axis represents the number of deaths, ranging from 0 to 1000. The graph shows a sharp initial rise in deaths in early 2020, peaking at approximately 900 deaths in late March. This is followed by a period of decline and fluctuation, with a notable dip in late April. A second, smaller peak occurs in early 2021, reaching about 400 deaths in late February, before declining again.

The line graph displays the daily count of deaths from COVID-19 in the United States. The x-axis represents time from March 2020 to March 2021, with major ticks every two months. The y-axis represents the number of deaths, ranging from 0 to 1000. The graph shows a highly volatile trend with several peaks and troughs. A major peak occurs in early 2020, reaching nearly 1000 deaths. This is followed by a period of relative stability with minor fluctuations. A second, even higher peak occurs in early 2021, reaching over 1000 deaths. The graph ends with a sharp decline in late 2021.

A bar chart showing the number of people in each age group. The x-axis lists age groups from 0-4 to 75+. The y-axis shows the number of people from 0 to 100. A red line indicates the total number of people, which is approximately 950.

Age Group	Number of People
0-4	95
5-9	95
10-14	95
15-19	95
20-24	95
25-29	95
30-34	95
35-39	95
40-44	95
45-49	95
50-54	95
55-59	95
60-64	95
65-69	95
70-74	95
75+	95
