

The chart displays the daily count of new COVID-19 cases in the Czech Republic. The data shows a period of relative stability around 18 cases in January, followed by a sharp rise to nearly 19 cases in early February. After a brief dip, the numbers rose again to a peak of over 19 cases in late February. This was followed by a period of fluctuation between 18 and 19 cases through March, with a notable spike in late March reaching over 19 cases, and then a sharp decline towards the end of the period shown.
